BeneFusion CS5
Central Infusion Supervision System

BeneFusion CS5 central infusion supervision system allows you to central monitor the infusion status and real-time information of all patients and medical pumps. The powerful operation system allows for connecting with at least 64 units of BeneFusion DS5 infusion supervision system, and over 512 units of infusion/syringe pumps.
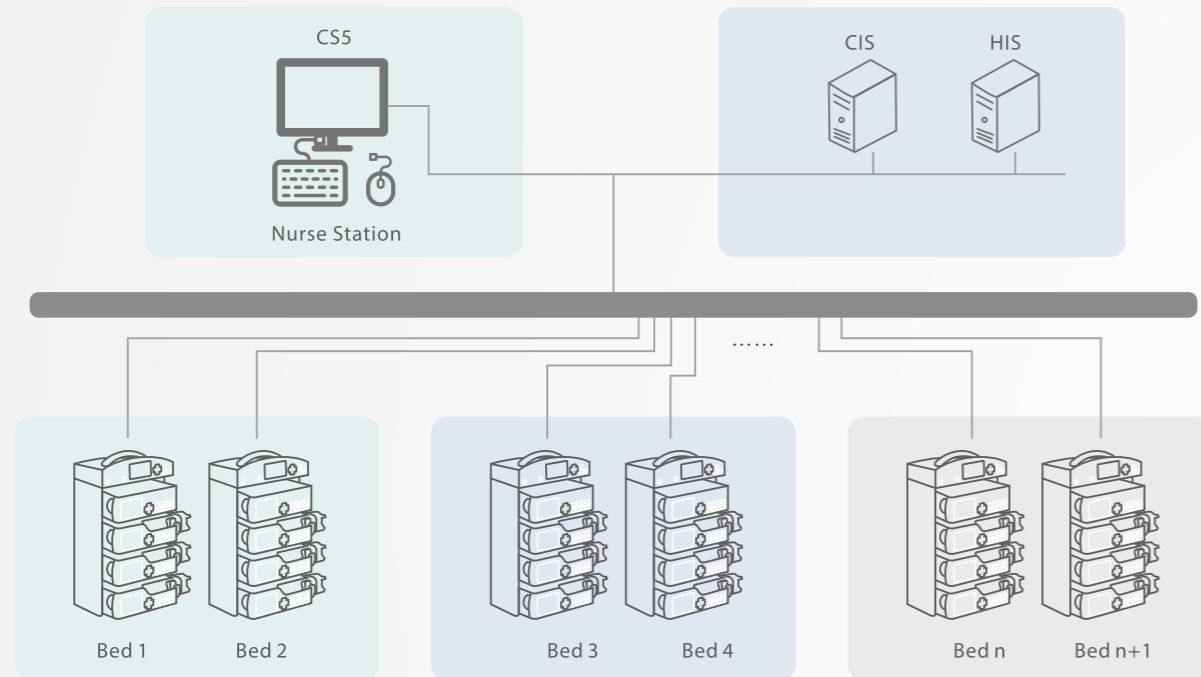

Patient and Infusion Information Management

Through BeneFusion CS5 central infusion supervision system, allows you to draw and display the actual location of any beds in ward, helping you to deal with clinical problems quickly. Admit patient and discharge patient, real-time display, check and edit patient information manually, or through barcode scanner, supoort at least 20,000 patients infusion information, alarm event and treatment record view.
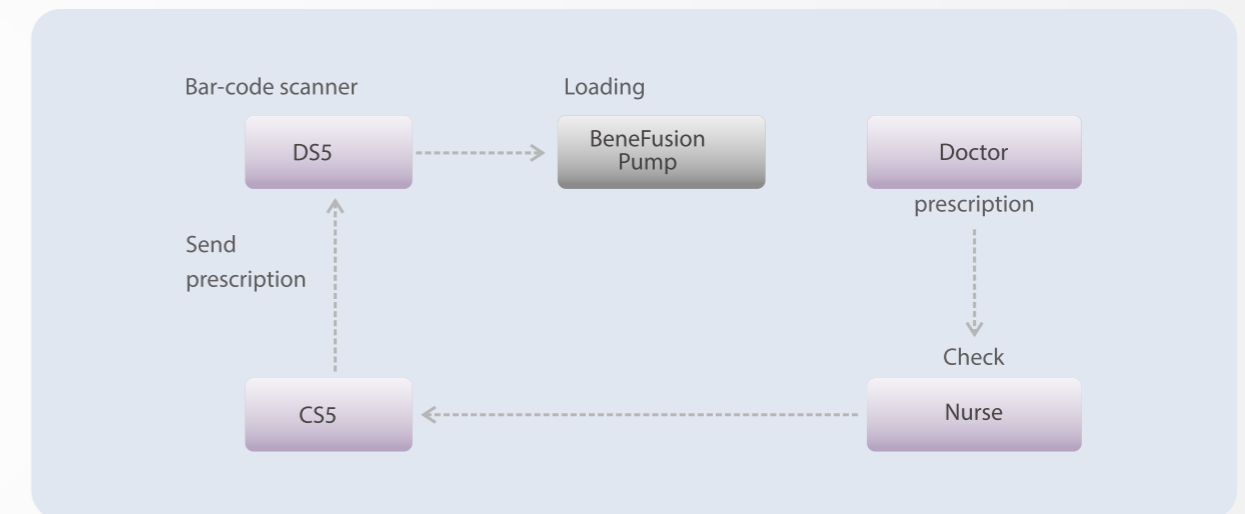

CS5 could automatically download the prescription from CIS/HIS, then send it to DS5 directly. Nurses do not need to edit the drug information any more, just press the start button, the pump will start the infusion quickly as the loaded prescription.

Drug Library Management

CS5 allows you to edit/import/export drug library, and easy updating for BeneFusion DS5 or infusion/syringe pump directly. The general drug library version supports for at least 2000 drugs.
